HAZARD CONTROL RECOGNITION AWARD

The Hazard Control Recognition Award is based on implemented **hazard controls** within IISC Member Organizations.

- A **Hazard Control** is a **specific, identifiable change implemented to reduce or eliminate an individual's exposure to a hazard in the workplace.**
 - Engineering control, redesign, guarding
 - Work practice changes that eliminate or reduce the risk to a hazard
 - Improvements to the personal protective equipment used by workers
 - Changes for previously uncontrolled environmental risk
 - Training on its own **will not** qualify as a hazard control. Training in conjunction with controlling a hazard can qualify, as long as there is documentation of the hazard prior to the training, along with the controls put in place to eliminate the hazard.

Explanation of Project

Before

- Before picture can be inserted here

After

- After picture can be inserted here

Brief explanation of hazard

Photo of hazard may be inserted
here

- After Photo of the project
may be inserted here.

Brief explanation of how the hazard was
controlled.

On the rare occasions we need to access the roof at Robert's Soap & Safety, we wanted to ensure the ladder would not be blown down by the wind.

Hazardous Material Spill Response Teams

Before:

For the past several years, Robert's Soap & Safety had one full Hazardous Material Spill Response Team, but they were all on first shift. We have been expanding our Second and Third shift operations.

After:

Recently, we were able to train enough employees to have full HazMat response on all three shifts, and several back-ups.

We are now equipped to handle a spill within the facility during all shifts.

Thank you
